

Salesforce Analysis Engine Features

Beta 1.0

Below is a list of the out-of-box features & reports. All of the data is retrieved in real time via the Salesforce API and searchable by user, object, or time range.

Universal Search:

- Quickly search with any keyword such as: username, metadata, or API Name
- Auto-Complete Feature: Intelligent search provides suggested results
- Wide-Spanned Analysis: See all changes done by users in a single page: Workflow rules, validation rules, user management, static resources, matching rules, customize campaign, activities, and much more.
- Easy Filters; Drill down into a specific category, timeframe, or individual
- Answer ad-hoc questions with a unified view showing all changes across your org

Latest Changes:

- View all changes performed in the past 7 days in a visual graph
- Ability to drill down to a specific time range
- Track & catch abnormal change activity

Latest Activity:

- Review all latest changes performed by administrators on your home page dashboard

Licensing Details:

- Get a clear view of all available/consumed license counts
- Search by type of license, active/disabled

User Permissions:

- Unified view showing all permissions associated with your users
- Easily filter by username to find all object level CRUD permissions
- Sort by individual, object, or permission type
- Export permissions to a downloadable document

VF Pages + Lightning Pages

- All changes performed in VF pages performed by administrators
- Sortable by date, time, user, or activity
- Help identify new VF pages in addition to modifications on existing
- Track if a user has overwritten your code

Apex Classes:

- All changes performed in Apex Classes over the past 6 months
- Sort by date, time, or user

Manage Users:

- All changes performed on the users in your organization
- Identify new changes/modifications (Ex; An email address change, accounts being enabled/disabled, password changes)

Login Details:

- Detailed report showing all successful and unsuccessful login attempts over the past 6 months
- Application, IP Address, Browser Details, Country, Login Type, Protocol Type – easily drill down into any category
- View all invalid password attempts
- Large amounts of attempts in a short duration are flagged

Connected App Details:

- 360-view of all connected apps across your organization
- Easily identify the latest added or modified
- Perform app cleanup

Health Logs:

An all-encompassing view of your organization visually displaying governor limits the organization has utilized.

- **Daily API Requests:** View consumed/available daily API requests
- **Daily Bulk API Requests:** View consumed/available bulk API callouts
- **Daily Sync Apex Executions:** Track the life force for any complex Sf architecture
- **Daily Workflow Emails:** View consumed/available workflow limit
- **Data Storage:** Quickly track the status of your storage consumption
- **File Storage:** Quickly track the status of your consumed file storage
- **Mass Email:** Track your daily consumed mass email limit

Whole Universe:

- 10,000-Foot view of your full organization
- Audit all changes performed in the last 6 months
- Sorted into sections such as: workflow rule, custom objects, custom apps, flows, and many more
- Easily sort results and find results immediately
